

Remerx company is a traditional european producer of rims and wheels for more than 25years! The part of production is also production of aluminium spokes for own production of wheels. In last years Remerx company also started production of high quality hubs and also stainless spokes.

We are using for production of rims aluminium material with optimal properties.

For hub production is used material with the top mechanical properties and correspond to a high requirements on strength and durability.

Stainless spokes are produced from high quality material DUPLEX from company SANDVICK which is top in the quality on the market.

With all these components we will get wheels with ideal rate **performance/price.**

RX 2603 - The front MTB hub with solid axle Ø 20 mm for bent spokes

RX 2680 – The rear combined hub for stainless with straight and head bending spokes.
